# Package 'shinymaterial'

June 2, 2018

Type Package

Version 0.5.3

Title Implement Material Design in Shiny Applications

Maintainer Eric Anderson <eric.ray.anderson@gmail.com>

<b>Description</b> Allows shiny developers to incorporate UI elements based on Google's Material design. See <a href="https://material.io/guidelines/">https://material.io/guidelines/</a> for more information.

Index		26
mate	rial_button Create a shinymaterial button	

# Description

Build a shinymaterial button. The initial value is zero, and increases by one on each press.

# Usage

```
material_button(input_id, label, icon = NULL, depth = NULL, color = NULL)
```

# **Arguments**

```
input_id String. The input identifier used to access the value.

String. The button text.

String. The name of the icon. Leave empty for no icon. Visit http://materializecss.com/icons.html for a list of available icons.

depth Integer. The amount of depth of the button. The value should be between 0 and 5. Leave empty for the default depth.

color String. The color of the button. Leave empty for the default color. Visit http://materializecss.com/color.html for a list of available colors.
```

```
material_button(
  input_id = "example_button",
  label = "Button",
  icon = "cloud",
  depth = 5,
  color = "blue lighten-2"
)
```

material\_card 3

material_card	material_card	Create a card that will contain UI content
---------------	---------------	--

#### **Description**

UI content can be placed in cards to organize items on a page.

# Usage

```
material_card(title, ..., depth = NULL)
```

# **Arguments**

title String. The title of the card
... The UI elements to place in the card
depth Integer. The amount of depth of the card. The value should be between 0 and 5.
Leave empty for the default depth.

# **Examples**

```
material_card(
  title = "Example Card",
  depth = 5,
  shiny::tags$h5("Card Content")
)
```

material\_checkbox

Create a shinymaterial checkbox

# Description

Build a shinymaterial checkbox. The value is a boolean (TRUE if checked, FALSE if not checked).

# Usage

```
material_checkbox(input_id, label, initial_value = FALSE, color = NULL)
```

# **Arguments**

input\_id String. The input identifier used to access the value.

label String. The checkbox label.

initial\_value Boolean. Is the checkbox initially checked?

color String. The color of the check. Leave empty for the default color. Visit http:

//materializecss.com/color.html for a list of available colors. This input requires using color hex codes, rather than the word form. E.g., "#ef5350",

rather than "red lighten-1".

material\_date\_picker

#### **Examples**

```
material_checkbox(
  input_id = "example_checkbox",
  label = "Checkbox",
  initial_value = TRUE,
  color = "#ef5350"
)
```

material\_column

Create a column to organize UI content

# **Description**

UI content can be placed in columns to organize items on a page.

#### Usage

```
material_column(..., width = 6, offset = 0)
```

### **Arguments**

... The UI elements to place in the column.

width Integer. The width of the column. The value should be between 1 and 12.

offset Integer. The offset to the left of the column. The value should be between 0 and

11.

### **Examples**

```
material_column(
  width = 4,
  shiny::tags$h1("Column Content")
)
```

 ${\tt material\_date\_picker} \quad \textit{Create a shinymaterial date picker}$ 

# Description

Build a shinymaterial date picker.

#### Usage

```
material_date_picker(input_id, label, color = NULL)
```

### **Arguments**

input\_id String. The input identifier used to access the value.

label String. The date picker label.

color String. The date picker color. Leave empty for the default color. Visit http:

//materializecss.com/color.html for a list of available colors.

material\_depth 5

# **Examples**

```
material_date_picker(
  input_id = "example_date_picker",
  label = "Date Picker"
)
```

material\_depth

Add depth to a UI element

# Description

Give a UI element the perception of depth by creating a shadow.

#### Usage

```
material_depth(..., depth = 4)
```

# **Arguments**

... The UI elements to apply the depth.

depth

Integer. The amount of depth. The value should be between 0 and 5. A value of 0 can be used to remove depth from objects that have depth by default.

# **Examples**

```
material_depth(
  depth = 5,
  material_card(title = "Example Depth")
)
```

material\_dropdown

Create a shinymaterial dropdown

# **Description**

Build a shinymaterial dropdown.

```
material_dropdown(input_id, label, choices = NULL, selected = NULL,
    multiple = NULL, color = NULL)
```

6 material\_file\_input

#### **Arguments**

input\_id String. The input identifier used to access the value.

label String. The dropdown label.

choices Named vector. The option names and underlying values.

selected String. The initially selected underlling value.

multiple Boolean. Can multiple items be selected?

color String. The color of the dropdown choices. Leave empty for the default color.

Visit http://materializecss.com/color.html for a list of available colors. This input requires using color hex codes, rather than the word form. E.g.,

"#ef5350", rather than "red lighten-1".

# **Examples**

```
material_dropdown(
  input_id = "example_dropdown",
  label = "Drop down",
  choices = c(
    "Chicken" = "c",
    "Steak" = "s",
    "Fish" = "f"
  ),
  selected = c("c"),
  multiple = FALSE,
  color = "#ef5350"
)
```

material\_file\_input

Create a shinymaterial file input

# **Description**

Build a shinymaterial file input.

#### Usage

```
material_file_input(input_id, label = "File", color = NULL)
```

# **Arguments**

input\_id String. The input identifier used to access the value.

label String. The file input button text.

color String. The color of the file input. Leave empty for the default color. Visit

http://materializecss.com/color.html for a list of available colors. *This input requires using color hex codes, rather than the word form. E.g., "#ef5350",* 

rather than "red lighten-1".

#### **Examples**

```
if (interactive()) {
  ui <-
 material_page(
    material_row(
      material_column(
        width = 12,
        material_file_input(
          input_id = "file_1",
          label = "file"
      )
   ),
    material_row(
     material_column(
        width = 12,
        tableOutput("contents")
   )
  )
  server <- function(input, output) {</pre>
    output$contents <- renderTable({</pre>
      # input$file_1 will be NULL initially. After the user selects
      # and uploads a file, it will be a data frame with 'name',
      # 'size', 'type', and 'datapath' columns. The 'datapath'
      # column will contain the local filenames where the data can
      # be found.
      in_file <- input$file_1</pre>
      if (is.null(in_file))
        return(NULL)
      read.csv(in_file$datapath)
    })
  }
  shinyApp(ui, server)
}
```

material\_floating\_button

Create a shinymaterial floating button

# Description

Build a shinymaterial floating button. The initial value is zero, and increases by one on each press.

```
material_floating_button(input_id, icon = NULL, depth = NULL,
    color = NULL)
```

8 material\_input

### **Arguments**

input\_id String. The input identifier used to access the value.

String. The name of the icon. Leave empty for no icon. Visit http://materializecss.com/icons.html for a list of available icons.

depth Integer. The amount of depth of the floating button. The value should be between 0 and 5. Leave empty for the default depth.

color String. The color of the floating button. Leave empty for the default color. Visit http://materializecss.com/color.html for a list of available colors.

# **Examples**

```
material_floating_button(
  input_id = "example_floating_button",
  icon = "mode_edit",
  depth = 5,
  color = "red lighten-3"
)
```

material\_input

Create a shinymaterial input

# **Description**

Build a shinymaterial input.

# Usage

```
material_input(type, ...)
```

# **Arguments**

type String. The type of input to be created.... Additional arguments for the input.

```
##-- switch --##
material_input(
  type = "switch",
  input_id = "example_switch",
  label = "Switch",
  off_label = "Off",
  on_label = "On",
  initial_value = TRUE
)
```

material\_modal 9

material_modal	Place UI content in a modal

# **Description**

Put any UI object inside of a modal. The modal will open when the button is pressed.

#### Usage

```
material_modal(modal_id, button_text, title, ..., button_icon = NULL,
floating_button = FALSE, button_depth = NULL, button_color = NULL,
close_button_label = "Close", display_button = TRUE)
```

### **Arguments**

```
modal_id
                   String. The ID for the modal. Must be unique per application.
button_text
                   String. The text displayed on the modal trigger button.
title
                   String. The title of the modal window.
                   The UI elements to place in the modal
button_icon
                   String. The name of the icon. Visit <a href="http://materializecss.com/icons">http://materializecss.com/icons</a>.
                   html for a list of available icons.
floating_button
                   Boolean. Should the modal trigger button be a floating button?
button_depth
                   Integer. The amount of depth of the button. The value should be between 0 and
                   5. Leave empty for the default depth.
                   String. The color of the button. Leave empty for the default color. Visit http:
button_color
                   //materializecss.com/color.html for a list of available colors.
close_button_label
                   String. The label of the modal close button.
display_button Boolean. Should the button be displayed in the app? (If FALSE, open_material_modal()
                   may be used to open the modal).
```

```
material_modal(
  modal_id = "example_modal",
  button_text = "Modal",
  title = "Example Modal Title",
  button_color = "red lighten-3",
  shiny::tags$p("Modal Content")
)
```

10 material\_page

#### **Description**

Build a shinymaterial number box.

#### Usage

```
material_number_box(input_id, label, min_value, max_value, initial_value,
  color = NULL)
```

# **Arguments**

input\_id String. The input identifier used to access the value.

label String. The number box label.

min\_value Number. The minimum allowable value.

max\_value Number. The maximum allowable value.

initial\_value Number. The initial value.

color String. The accent color of the number box. Leave empty for the default color.

Visit http://materializecss.com/color.html for a list of available colors. This input requires using color hex codes, rather than the word form. E.g.,

"#ef5350", rather than "red lighten-1".

# Examples

```
material_number_box(
  input_id = "example_number_box",
  label = "number box",
  min_value = 5,
  max_value = 15,
  initial_value = 10,
  color = "#ef5350"
)
```

material\_page

Create a shinymaterial page

#### **Description**

Build a shinymaterial page.

```
material_page(..., title = "", nav_bar_fixed = FALSE,
  nav_bar_color = NULL, background_color = "grey lighten-4",
  font_color = NULL, include_fonts = FALSE, include_nav_bar = TRUE)
```

material\_parallax 11

#### **Arguments**

... The UI elements to place in the page.

title String. The title of the page.

nav\_bar\_fixed Boolean. Should the nav bar remain fixed on the screen?

nav\_bar\_color Color of the nav bar. Leave blank for the default color. Visit http://materializecss.

com/color.html for a list of available colors.

background\_color

Page background color. Leave blank for the default color. Visit http://materializecss.

com/color.html for a list of available colors.

font\_color String. The title font color. Leave blank for the default color. Visit http:

//materializecss.com/color.html for a list of available colors. *Title color requires using word forms of colors (e.g. "deep-purple")*. Also, lighten or darken

effects do not work on title colors.

include\_fonts Boolean. Should the material font files be included? (This will place the font

sources in a directory 'www', at the same location as the app code.)

include\_nav\_bar

Boolean. Should the material nav bar be included?

### **Examples**

```
material_page(
  title = "Example Title",
  nav_bar_fixed = TRUE,
  nav_bar_color = "red lighten-2",
  background_color = "blue lighten-4",
  shiny::tags$h1("Page Content")
)
```

material\_parallax

Create a parallax image

# **Description**

Use this function to create a parallax effect in your application.

# Usage

```
material_parallax(image_source)
```

# **Arguments**

image\_source

String. The image file name. Place the image in a folder labeled 'www' at the same level as the application (server.R & ui.R).

```
material_parallax(
  image_source = "example_image.jpg"
)
```

12 material\_radio\_button

#### **Description**

Build a shinymaterial password box.

#### Usage

```
material_password_box(input_id, label, color = NULL)
```

#### **Arguments**

input\_id String. The input identifier used to access the value.

label String. The password box label.

color String. The accent color of the password box. Leave empty for the default

color. Visit <a href="http://materializecss.com/color.html">http://materializecss.com/color.html</a> for a list of available colors. This input requires using color hex codes, rather than the word form.

E.g., "#ef5350", rather than "red lighten-1".

#### **Examples**

```
material_password_box(
  input_id = "example_password_box",
  label = "password box",
  color = "#ef5350"
)
```

# Description

Build a shinymaterial radio button.

# Usage

```
material_radio_button(input_id, label, choices, color = NULL)
```

# **Arguments**

input\_id String. The input identifier used to access the value.

label String. The radio button label.

choices Named vector. The option names and underlying values.

color String. The color of the radio buttons. Leave empty for the default color. Visit

http://materializecss.com/color.html for a list of available colors. *This input requires using color hex codes, rather than the word form. E.g., "#ef5350",* 

rather than "red lighten-1".

material\_row 13

# **Examples**

```
material_radio_button(
  input_id = "example_radio_button",
  label = "Radio Button",
  choices = c(
    "Cake" = "c",
    "Pie" = "p",
    "Brownie" = "b"
  ),
  color = "#ef5350"
)
```

material\_row

Create a row to organize UI content

# Description

UI content can be placed in a row to organize items on a page.

# Usage

```
material_row(...)
```

# **Arguments**

... The UI elements to place in the row.

# **Examples**

```
material_row(
   shiny::tags$h1("Row Content")
)
```

material\_side\_nav

Create a side-nav that contains UI content

# Description

UI content can be placed in side-nav.

```
material_side_nav(..., fixed = FALSE, image_source = NULL,
background_color = NULL)
```

#### **Arguments**

The UI elements to place in the side-nav. . . .

Boolean. Set to TRUE to keep side-nav open on large screens. fixed

image\_source String. The background image file name. Place the image in a folder labeled

'www' at the same level as the application (server.R & ui.R).

background\_color

Side-nav background color. Leave blank for the default color. Visit http://

materializecss.com/color.html for a list of available colors.

# **Examples**

```
material_side_nav(
  fixed = FALSE,
  image_source = "example_image.jpg",
  background_color = "blue lighten-4",
  shiny::tags$h1("Side-Nav Content")
)
```

material\_side\_nav\_tabs

Place UI content within a side-nav tab

# **Description**

Use this function to create side-nav tabs in your application.

#### Usage

```
material_side_nav_tabs(side_nav_tabs, icons = NULL, color = NULL,
  font_color = NULL)
```

#### **Arguments**

side\_nav\_tabs Named vector. The side-nav tab display names and corresponding side-nav tab

icons String vector. The names of the icons. Leave blank for no icons, or use "none".

The length of the vector must match the length of side nav tabs. Visit http:

//materializecss.com/icons.html for a list of available icons.

color String. The accent color of the side-nav tab wave animation. Leave blank for

the default color. Visit http://materializecss.com/waves.html for a list of available colors. Side-nav tab color requires using word forms of colors (e.g.

"purple").

font\_color String. The side-nav tabs font color. Leave blank for the default color. Visit

> http://materializecss.com/color.html for a list of available colors. Sidenav tab color requires using word forms of colors (e.g. "deep-purple"). Also,

lighten or darken effects do not work on side-nav tab colors.

#### **Examples**

```
material_side_nav_tabs(
    side_nav_tabs = c(
        "Example Side-Nav Tab 1" = "example_side_nav_tab_1",
        "Example Side-Nav Tab 2" = "example_side_nav_tab_2"
    ),
    icons = c("cloud", "none"),
    color = "teal"
)
```

```
material_side_nav_tab_content
```

Place UI content within a side-nav tab

# Description

Use this function to place UI content within a specific side-nav tab.

# Usage

```
material_side_nav_tab_content(side_nav_tab_id, ...)
```

# **Arguments**

```
side_nav_tab_id
```

String. The side-nav tab id in which to place the UI content.

. The UI elements to place in the side-nav tab.

#### **Examples**

```
material_side_nav_tab_content(
    side_nav_tab_id = "example_side_nav_tab_1",
    shiny::tags$h1("Side-Nav Tab Content")
)
```

material\_slider

Create a shinymaterial slider

#### **Description**

Build a shinymaterial slider.

```
material_slider(input_id, label, min_value, max_value, initial_value,
  color = NULL)
```

### **Arguments**

input\_id String. The input identifier used to access the value.

label String. The slider label.

min\_value Number. The minimum value on the slider.

max\_value Number. The maximum value on the slider.

initial\_value Number. The initial value of the slider.

color String. The slider color. Leave empty for the default color. Visit http://

materializecss.com/color.html for a list of available colors. This input requires using color hex codes, rather than the word form. E.g., "#ef5350", rather

than "red lighten-1".

#### **Examples**

```
material_slider(
  input_id = "example_slider",
  label = "slider",
  min_value = 5,
  max_value = 15,
  initial_value = 10,
  color = "#ef5350"
)
```

material\_spinner\_show Create a material preloader (spinner)

#### **Description**

Display a preloader (spinner) while server is busy.

# Usage

```
material_spinner_show(session, output_id)
```

# **Arguments**

session The session object passed to function given to shinyServer.

output\_id The output id for which the spinner will be a placeholder for.

```
if(interactive()){
    library(shiny)
    library(shinymaterial)

ui <- material_page(
    title = "Spinner Example",
    numericInput(inputId = "n", label = "", value = 10),
    plotOutput("n_plot")
)

server <- function(input, output, session) {</pre>
```

material\_switch 17

```
output$n_plot <- renderPlot({
    #--- Show the spinner ---#
    material_spinner_show(session, "n_plot")

#--- Simulate calculation step ---#
    Sys.sleep(time = 5)

#--- Hide the spinner ---#
    material_spinner_hide(session, "n_plot")

    plot(1:input$n)
    })

shinyApp(ui = ui, server = server)
}</pre>
```

material\_switch

Create a shinymaterial switch

# **Description**

Build a shinymaterial switch. The value is a boolean (TRUE if 'on', FALSE if 'off').

# Usage

```
material_switch(input_id, label, off_label = "", on_label = "",
  initial_value = FALSE, color = NULL)
```

# **Arguments**

input\_id String. The input identifier used to access the value.

label String. The switch label.

off\_label String. The label for the 'off' position of the switch.
on\_label String. The label for the 'on' position of the switch.

initial\_value Boolean. Is the switch initially on?

color String. The color of the switch. Leave empty for the default color. Visit http:

//materializecss.com/color.html for a list of available colors. This input requires using color hex codes, rather than the word form. E.g., "#ef5350",

rather than "red lighten-1".

```
material_switch(
  input_id = "example_switch",
  label = "Switch",
  off_label = "Off",
  on_label = "On",
  initial_value = TRUE,
  color = "#ef5350"
)
```

18 material\_tab\_content

material\_tabs

Place UI content within a tab

# **Description**

Use this function to create tabs in your application.

# Usage

```
material_tabs(tabs, color = NULL)
```

# **Arguments**

tabs Named vector. The tab display names and corresponding tab ids.

color String. The accent color of the tabs. Leave blank for the default color. Visit

http://materializecss.com/color.html for a list of available colors. *Tab color requires using word forms of colors (e.g. "deep-purple"). Also, lighten or darken effects do not work on tab colors.* 

### **Examples**

```
material_tabs(
  tabs = c(
    "Example Tab 1" = "example_tab_1",
    "Example Tab 2" = "example_tab_2"
  ),
  color = "deep-purple"
)
```

#### **Description**

Use this function to place UI content within a specific tab.

# Usage

```
material_tab_content(tab_id, ...)
```

# **Arguments**

tab\_id String. The tab id in which to place the UI content.
... The UI elements to place in the tab.

```
material_tab_content(
  tab_id = "example_tab_1",
  shiny::tags$h1("Tab Content")
)
```

material\_text\_box 19

material\_text\_box

Create a shinymaterial text box

# **Description**

Build a shinymaterial text box.

# Usage

```
material_text_box(input_id, label, color = NULL)
```

#### **Arguments**

input\_id String. The input identifier used to access the value.

label String. The text box label.

color String. The accent color of the text box. Leave empty for the default color. Visit

http://materializecss.com/color.html for a list of available colors. *This input requires using color hex codes, rather than the word form. E.g., "#ef5350",* 

rather than "red lighten-1".

# **Examples**

```
material_text_box(
  input_id = "example_text_box",
  label = "text box",
  color = "#ef5350"
)
```

open\_material\_modal

Open a material modal programmatically.

### **Description**

Open a material modal programmatically (server side).

# Usage

```
open_material_modal(session, modal_id)
```

# **Arguments**

session The session object passed to function given to shinyServer.

modal\_id String. The ID of the modal to open.

```
## Not run:
open_material_modal(session, "example_modal")
## End(Not run)
```

side\_nav\_tabs\_info

Query information about the side-nav tabs.

# **Description**

Query information about the side-nav tabs (e.g. which tab is active).

# Usage

```
side_nav_tabs_info(input = NULL)
```

# **Arguments**

input

The input object in the shiny session.

# **Examples**

```
## Not run:
side_nav_tabs_info(input)
## End(Not run)
```

update\_material\_checkbox

Change the value of a material\_checkbox on the client

# **Description**

Change the value of a material\_checkbox on the client.

# Usage

```
update_material_checkbox(session, input_id, value = NULL)
```

# Arguments

session The session object passed to function given to shinyServer.

input\_id The input\_id of the material\_checkbox.

value Boolean. The value to set for the material\_checkbox.

```
## Not run:
update_material_checkbox(
   session,
   input_id = "example_checkbox",
   value = TRUE
)
## End(Not run)
```

```
update_material_date_picker
```

Change the value of a material\_date\_picker on the client

# **Description**

Change the value of a material\_date\_picker on the client.

# Usage

```
update_material_date_picker(session, input_id, value = NULL)
```

# **Arguments**

session The session object passed to function given to shinyServer.

input\_id The input\_id of the material\_date\_picker.

value The value to set for the material\_date\_picker.

#### **Examples**

```
## Not run:
update_material_date_picker(
   session,
   input_id = "example_date_picker",
   value = "10 April, 2012"
)
## End(Not run)
```

update\_material\_dropdown

Change the value of a material\_dropdown on the client

# Description

Change the value of a material\_dropdown on the client.

# Usage

```
update_material_dropdown(session, input_id, value = NULL, choices = NULL)
```

# **Arguments**

session The session object passed to function given to shinyServer.

input\_id The input\_id of the material\_dropdown.

value The value to set for the material\_dropdown.

choices The choices to set for the material\_dropdown.

#### **Examples**

```
## Not run:
update_material_dropdown(
   session,
   input_id = "example_dropdown",
   value = "New Text"
)
## End(Not run)
```

```
update_material_number_box
```

Change the value of a material\_number\_box on the client

# Description

Change the value of a material\_number\_box on the client.

# Usage

```
update_material_number_box(session, input_id, value = NULL)
```

# **Arguments**

session The session object passed to function given to shinyServer. input\_id The input\_id of the material\_number\_box.

value The value to set for the material\_number\_box.

# **Examples**

```
## Not run:
update_material_number_box(
    session,
    input_id = "example_number_box",
    value = 3
)
## End(Not run)
```

```
update_material_password_box
```

Change the value of a material\_password\_box on the client

# **Description**

Change the value of a material\_password\_box on the client.

```
update_material_password_box(session, input_id, value = NULL)
```

#### **Arguments**

session The session object passed to function given to shinyServer.
input\_id The input\_id of the material\_password\_box.

value The value to set for the material\_password\_box.

# **Examples**

```
## Not run:
update_material_password_box(
    session,
    input_id = "example_password_box",
    value = "New Password"
)
## End(Not run)
```

update\_material\_radio\_button

Change the value of a material\_radio\_button on the client

# **Description**

Change the value of a material\_radio\_button on the client.

# Usage

```
update_material_radio_button(session, input_id, value = NULL)
```

# **Arguments**

session The session object passed to function given to shinyServer.

input\_id The input\_id of the material\_radio\_button.

value The value to set for the material\_radio\_button.

```
## Not run:
update_material_radio_button(
    session,
    input_id = "example_radio_button",
    value = "new_value"
)
## End(Not run)
```

```
update_material_slider
```

Change the value of a material\_slider on the client

# Description

Change the value of a material\_slider on the client.

# Usage

```
update_material_slider(session, input_id, value = NULL)
```

# **Arguments**

session The session object passed to function given to shinyServer.

input\_id The input\_id of the material\_slider.

value The value to set for the material\_slider.

# **Examples**

```
## Not run:
update_material_slider(
    session,
    input_id = "example_slider",
    value = "new_value"
)
## End(Not run)
```

```
update_material_switch
```

Change the value of a material\_switch on the client

# **Description**

Change the value of a material\_switch on the client.

# Usage

```
update_material_switch(session, input_id, value = NULL)
```

# Arguments

session The session object passed to function given to shinyServer.

input\_id The input\_id of the material\_switch.

value Boolean. The value to set for the material\_switch.

# **Examples**

```
## Not run:
update_material_switch(
   session,
   input_id = "example_switch",
   value = TRUE
)
## End(Not run)
```

update\_material\_text\_box

Change the value of a material\_text\_box on the client

# Description

Change the value of a material\_text\_box on the client.

# Usage

```
update_material_text_box(session, input_id, value = NULL)
```

# **Arguments**

session The session object passed to function given to shinyServer.
input\_id The input\_id of the material\_text\_box.
value The value to set for the material\_text\_box.

```
## Not run:
update_material_text_box(
    session,
    input_id = "example_text_box",
    value = "New Text"
)
## End(Not run)
```
